

Make **trust** your North Star.

Solmax measures everything it does — and almost nothing about how it is experienced. TrustOS reads the state of every stakeholder relationship: a **leading indicator** of resilience and growth that warns you before the numbers move.

ENGAGEMENT

TrustOS as Brand Tracker

DATE

August 2026

THE STARTING POSITION

Solmax doesn't have an awareness problem. It has a **self-awareness** problem.

You said it clearly in our conversation: Solmax is operating in the dark. Decisions on gut feel. Regions running their own P&Ls. Five or more legacy businesses stitched together. A brand architecture live only since the end of 2024.

All the right bets are being made. But there is a gap between the strategy and the stakeholder — **and until you can measure it, you cannot close it.**

5+

legacy businesses stitched together

58

countries, eight product brands

2024

brand architecture live since year end

THAT GAP HAS A NAME

Integrity

The alignment between what Solmax commits to, what stakeholders believe it stands for, and what they actually experience.

The good news: Solmax has not lost trust so much as it has **not yet built it deliberately.** Very different starting position. Real opportunity.

Trust position 58 / 100. Functional.

WHAT 58 MEANS

Trust is real, but uneven. Some relationships carry the business; others are quietly costing it — and the difference only shows under change.

Your claims are accepted — but they are checked first, and that check has a cost in time and margin.

Strong relationships are subsidising weak ones. Because it averages out, nobody sees which is which.

Change is expensive, because belief has to be rebuilt each time rather than carried over.

Above 70, trust starts absorbing shocks for you — you get the benefit of the doubt, and claims land first time. That is the move worth making.

How to read the 58. It is an estimate inferred from your public footprint — news, policy pages, trade press, investor disclosures, employer reviews. No stakeholder has been surveyed to produce it. Measuring properly is what replaces it with a number you can take to a board.

The rebuild is moving faster than the story.

52Connection
driver**6**senior appointments
in twenty-one months**3.1**employer sentiment,
out of 5

WHAT WE SEE

Connection is the thinnest layer — the gap between the rebuild and the story people hear. And the rebuild has not slowed: three more regional leaders landed this summer, in EMEA, Asia Pacific and the Americas. Six senior appointments in twenty-one months.

THE CHALLENGE

Every move is defensible. But each one reaches stakeholders **without a story attached** — and it shows. Employer sentiment sits at 3.1 out of 5. The faster the transformation moves, the wider the gap opens.

WHY IT MATTERS

Solmax is not an outlier. Across twelve sectors we have read, Connection is the weakest layer in eleven — trailing Clarity by about 18 points. Solmax is running slightly ahead of that pattern. **The opportunity is to break it entirely.**

THE AMBITION

Solmax as a **movement**, not just a manufacturer.

When we asked how Solmax should define itself — geosynthetics manufacturer, or protector of land and water — Karen's answer pointed at something bigger than a positioning statement.

THE PRECEDENT

Ørsted did not just change its own business. It decarbonised a category and rebuilt communities. That is what operationalising a purpose looks like — not campaigns, but every interaction, consistently, over time.

THE POSITION

Solmax has the same potential: the world's largest geosynthetics manufacturer, working where sustainable construction, land protection and water security meet. Get the promise right and you don't just win deals. You shape how the category thinks.

The difference between a company and a movement is **integrity at scale**: when what you believe, what you say, and what you do are the same thing — and stakeholders can feel it.

The proof exists inside Solmax. The **voice** does not yet.

12

sustainability
commitments, written in
the future tense

published sustainability
reports, LCAs or product
declarations

WHAT WE SEE

Your sustainability commitments are written almost entirely in the future tense. Twelve of them. As of this month: no published sustainability report, no Solmax-authored life-cycle assessment, no product declarations we could verify. The one life-cycle study your policy page cites belongs to someone else.

THE OPPORTUNITY

This is the biggest unclaimed position in the category — and it is yours to take. Environmental protection is the purpose of geosynthetics. The proof exists inside Solmax. The voice does not yet.

WHY IT MATTERS

Interface did exactly this: it made sustainability evidence its edge, and rivals copied it. But evidence only compounds if you know it is landing. Confidence measures whether your proof is believed — and by whom.

Nineteen relationships. Not one score.

Treat this as a first draft, not a finding. It is inferred from public signal, so it will be wrong in places — groups we have split that you run as one, relationships we cannot see from outside, and above all the weight each one actually carries in your business. Mapping the ecosystem properly is the first thing we do together, in Step 01, before a single stakeholder is surveyed.

THE PROPOSITION

TrustOS becomes your brand tracker.

A conventional brand tracker measures awareness, consideration, loyalty. TrustOS explains the **why** underneath them — which relationships are strong, where belief is leaking, what to do next. Not instead of brand intelligence. A better version of it.

DRIVER 01

Clarity

What's said

Is the promise understood, consistent and decision-ready — across every region and audience?

DRIVER 02

Connection

What's experienced

Does every stakeholder actually experience the same thing — or does it change by market, brand and channel?

DRIVER 03

Confidence

What can be proved

Are you delivering what you said, with proof stakeholders can verify for themselves?

FOUNDATION · INTEGRITY

The alignment between what Solmax commits to, communicates and delivers. Stronger integrity, higher trust. Higher trust, stronger brand.

Reputation is what people say about what you've done. Trust is whether they believe in what you do next.

The groups do not move together. An **average** hides it.

Customers

Reads strong

Investors

Reads strong

Employees

Reads thin

Communities

Reads mixed

WHAT WE SEE

Customers and investors read strong — award-winning product credibility, and La Caisse behind you since 2017 with the credit facility extended to 2027.

Employees read thin. Community standing reads mixed — the trade-press voice is largely Solmax talking about Solmax.

THE CHALLENGE

A conventional tracker averages those four and reports it as healthy. **That average is the problem:** it hides the two relationships carrying the transition risk behind the two that are already strong. You would be measuring, and still in the dark.

WHY IT MATTERS

TrustOS scores each group separately, then by region and vertical. It is the difference between knowing the number moved and **knowing which relationship moved it** — the difference between a dashboard you read and one you act on.

FOR THE LEADERSHIP TEAM

Bring precision to your vision.

Solmax measures everything it does — and almost nothing about how it is experienced. That knowledge exists, but it is scattered: a fragment in the CRM, a fragment in the engagement survey, a fragment in the trade press. **No single function owns the whole picture, so nobody can act on it.**

£841bn

of FTSE 350 value is attributable to trust — 28% of total market cap. Not a comms line. Priced into the business.

ECHO RESEARCH, 2026

81%

cite "a brand I can trust" as a top reason to buy. Trust now sits alongside price and quality in the decision.

EDELMAN, 2025

45 vs 100

weeks to recover from crisis. Strong-trust brands came back in 45; the broader market took 100.

KANTAR BRANDZ

ONE INSTRUMENT, FOUR SEATS AT THE TABLE

What each seat gets from the same number.

BRAND & COMMUNICATIONS

Prove what brand actually moved.

Marketing gets judged on outputs — reach, impressions, share of voice. TrustOS judges it on the thing it was meant to move: whether stakeholders believe you. Brand stops being a cost line and becomes an asset with a trend.

BUSINESS DEVELOPMENT

Sell into the relationships that are ready.

Trust moves before revenue does. A quarterly read shows which regions, verticals and buyer groups believe Solmax enough to specify it — and which need proof first. It tells you where the next win is warm.

THE DECISION

Give the room something it can't argue with.

Every function has an opinion about the brand. None of them has a number. TrustOS gives the SLT one instrument: where trust is strong, where it is leaking, what changed since last quarter. Prioritised actions, not more data to interpret.

ONE VIEW

Seven fragments, or one picture.

NPS reads one question. Engagement surveys read one group. Reputation monitoring reads the past. ESG ratings read the disclosure. The CRM reads the deal. Each is real, and each is partial. TrustOS reads the thing they all orbit.

This is the **say-do gap no single function owns** — which is exactly why it goes unmeasured, and exactly why it belongs at SLT level rather than inside one department's budget.

Live in **six weeks**. Board-ready from your first read.

STEP 01 Set-up & onboarding

Before we collect a single data point, we agree what the dashboard needs to show — and audit what you already hold.

- Map the stakeholder ecosystem properly — who the groups really are, which relationships carry the most weight, and who owns each one internally.
- Segmentation beneath them, by region, vertical and relationship type.
- The metrics that matter to each group.
- Data you hold now versus gaps that need research.
- Configuration for eight product brands and 58 countries.

DIMENSION	WHAT WE NEED
Intent	Strategy, leadership priorities, strategic bets, ESG and governance commitments.
Expectation	Positioning and messaging, communications archive, tone and voice.
Reality	Stakeholder survey outputs, employee engagement data, retention, NPS, CSAT. Where gaps exist, we design and run targeted surveys.

Not a one-off audit. An operating rhythm.

Once live, TrustOS runs every quarter: updated scores by stakeholder group, a "what changed" narrative tied to real events, the driver breakdown, and the actions that follow. **Leadership gets a reliable signal, year on year.**

PHASE A

Sense

Establish the baseline. Find where belief is leaking.

PHASE B

Measure

Track quarterly. Tie every movement to a decision you actually made.

PHASE C

Act

Close the gaps — with the solutions that fit what the data found.

Q1 → Q2 → Q3 → Q4 → YEAR ON YEAR

WHAT WE CAN ALREADY SEE

Where a public read stops

Nothing published from outside reaches the Reality layer.

15/19

relationships carry
usable public signal

2020

pilot tracker — a
benchmark to measure
movement against

WHAT WE SEE

Fifteen of your nineteen relationships carry usable public signal — richer than most companies we read. But nothing published from outside reaches the Reality layer. No public source tells you what a specifier in Texas actually experiences.

THE OPPORTUNITY

Reaching that layer is the only variable cost here — and you already hold part of it. The 2020 pilot tracker is a benchmark. The CRM will carry retention and satisfaction data. Every source you hold is a survey we don't run.

WHY IT MATTERS

Step 01 is a data assessment — we map what you hold before anyone is surveyed. That assessment sets the fieldwork, and the fieldwork sets the price.

THEN THE WORK

TrustOS senses where trust is leaking. MissionCTRL closes the gap.

Measurement on its own changes nothing. Below is the work that follows — mapped to the driver it moves. **None of it is costed here, deliberately.** Scoping this before the baseline exists would be guessing, and you would be paying for the guess.

01 Believe

CLARITY

A purpose worth aligning behind.

Purpose, Positioning & Proposition

Design for Good

Narrative & Messaging

02 Align

04 Move

COMPOUND

Belief, alignment and proof compound into momentum.

Category Leadership

Movement Activation

Compounding Loop

On today's read, Solmax's work would start at **Align** and **Prove** — one operating language across 58 countries and eight brands, and sustainability evidence that does what the policies promise. We would confirm that with the baseline, not before it.

WHERE THIS LEAVES US

Six things we can say now. One we can't.

Everything below is read from the outside. Not one line of it has been confirmed by a single Solmax stakeholder — which is the seventh thing, and the reason for the first conversation.

01 **Connection is your thinnest layer** — and six senior appointments in twenty-one months keep widening it.

03 **Nineteen relationships — four invisible from outside:** partners, distributors, installers, Performance Materials.

05 **Brand impact, business development and board reporting reading the same number** — instead of five functions each holding a fragment.

02 **The sustainability proof exists inside Solmax.** The public record still shows only promises, not evidence.

04 **Customers and investors read strong; employees and communities do not.** A single averaged score would hide the two groups carrying the transition.

06 **A baseline live within six weeks of kick-off** — and the data you already hold is what sets the price.

That is the case for measuring. Here is what it costs — and what it doesn't.

THE INVESTMENT

One number for the measurement. Nothing hidden behind it.

Two costs sit inside a TrustOS programme. The platform, analysis and reporting is fixed. The survey fieldwork is not — **it falls as the data you already hold rises**. We have scoped Solmax at the top of the range, because six stakeholder groups across eight brands and 58 countries is a build, not a template.

£75,000

per year — four quarterly Snapshots

Indicative range £69,000 – £81,000. Unlimited users, quarterly updates, and Brand AI Chat included.

Platform, analysis & reporting — four Snapshots	£45,000
---	---------

Survey fieldwork — full, across all groups	£30,000
--	---------

Recommended annual programme	£75,000
------------------------------	---------

WHY THE TOP OF THE RANGE

- Six stakeholder groups, not the usual three.
- Segmentation across regions, verticals and eight product brands.
- Four relationships with no readable signal at all — all need fielding from scratch.
- Multi-language survey deployment across a 58-country footprint.

If Step 01 finds more usable data than we expect, the fieldwork falls and so does the price — to **£69,000** at medium readiness, **£63,000** at high. **It moves in one direction from here.**

WHAT IS NOT IN THIS NUMBER

The MissionCTRL work

Believe, Align, Prove and Move are scoped and costed once the baseline shows where the gaps are — and how big they are.

Bespoke development

Custom integrations, bespoke dashboard views or CRM connections sit outside the licence. We will know what is needed after Step 01.

Stakeholder panels and synthetic audience

A year-two capability, once there is enough measured history to model against.

Indicative pricing, not a quote. Final scope and price are confirmed after the data assessment in Step 01 — which is exactly why that step comes first. Multi-year terms available; trust is a trend metric and the value compounds year on year.

WHAT HAPPENS NEXT

One hour. The dashboard. A start date.

An hour to walk the dashboard properly, confirm what you want it to show, sense-check the data position that sets the price, and **agree when we start.**

FOR KAREN

It turns brand from a cost line into a measured asset — the say-do gap, quantified, with a number that moves.

FOR SCOTT

It answers the question underneath every new opportunity: does the specification community still believe in us while we rebuild?

Same instrument. Two different answers, **both board-ready.**

You are both now in the room where this gets decided. This is the project that arrives there with evidence instead of an opinion.

FOUR QUESTIONS TO BRING TO THE CONVERSATION

- 01 Which stakeholder groups are the priority for year one?
- 02 Do you agree with TrustOS becoming the brand tracker?
- 03 What stakeholder data do you already hold — and who owns it?
- 04 Would the surveys be run by us, or in-house with our templates?

Don't build a brand. **Create a movement.**

MissionCTRL helps enterprise and mid-market leaders build brands that move people, markets and decisions — powered by TrustOS, our trust measurement intelligence platform.
